

MATHS

Why is the study of MATHEMATICS important?

MATHEMATICS has two disciplines: Pure and Applied – Pure Mathematics is the abstract science of number, quantity, and space, either as abstract concepts and Applied Mathematics is where the knowledge learned is applied to other disciplines such as statistics, physics and engineering.

In Year 7 and 8 your mathematics study focuses on mastery building fluency and understanding in readiness for your future GCSE and even A level mathematics study. Our curriculum is carefully designed to ensure that all students get a firm grounding in the basic rules of number. This is differentiated by depth, as opposed to students racing onto the next topic. This approach develops more confident mathematicians, as students move through the curriculum. Your study of mathematics at Outwood will make you think about the beauty of how numbers connect and how processes relate to each other. Mathematics encourages you to discover those connections for yourself, to make you a detective of mathematics and to explore how to solve problems. This enables you to become an analytical thinker, someone who sees that the answer is only the beginning. It will help you to learn how to make conjectures (a conclusion based on evidence, patterns and thought, but not yet confirmed with proof) to reason and to prove. It will enable you to be more logical in your approach to complex issues and be more analytical.

From Year 7 you will have the exciting opportunity to explore the four rules of number in great depth – how addition leads to multiplication, and how these two lead to subtraction and division. You will discover how these four rules can be applied to fractions, decimals and algebra and how multiplicative reasoning can be applied to many areas of maths, such as percentages, ratio, proportion and enlargement to name but a few. You will get to investigate the beauty of mathematics connected to shape, and the usefulness it brings in analysing data and solving mechanical problems.

Your study of Mathematics will encourage you to think deeply and help you to problem solve more effectively– a great life skill that all universities and employers will appreciate. Across your study you will explore number, algebra, shape and space and statistics. Lessons will provide a wide range of opportunities for constructing your own learning and discovering your own rules, through the use of concrete materials such as counters, through pictorial representations to demonstrate mathematical concepts and to apply these to solve problems, both abstract and from real-life.

Maths lessons will be full of discussion, questioning, proving and explaining. You are going to love it! Mathematics will expand your mind!

Big Questions such as: How tiny is the earth in comparison with the universe?, How can solutions to difficult engineering problems can be found by using graphs and calculus?, How do people predict what is going to happen in the economy? and other such seemingly bewildering questions will be answered ... you just need to learn the basics, be an inquisitive learner, and the rest will follow.

What skills will the study of Mathematics teach you?

You are a citizen in this world and you need to know the basic skills of number and how to apply them to a range of problems – known as ‘being numerate’. It will teach you:

- Not to be afraid of “being lost” and having to struggle to find one’s way through the problem – RESILIENCE!
- To use calculation to solve basic problems
- To make and use generalisations—often quite quickly. One of the basic abilities, easily detectable even at the level of primary school: after solving a single example from a series, a child immediately knows how to solve all examples of the same kind.
- To have rapid and sound memorisation of mathematical material.
- To be able to concentrate on mathematics for long periods without apparent signs of tiredness.
- To be able to offer and use multiple representations of the same mathematical object. (For example, switching easily between representations of the same function by tables, charts, graphs, and analytic expressions.)
- An instinctive tendency to approach a problem in different ways: even if a problem has been already solved, you are keen to find an alternative solution.
- To utilise analogies and make connections.
- Skills to link two (or more) elementary procedures to construct a solution to a multi-step problem.
- To recognise what it means to “know for certain”.
- To detect unstated assumptions in a problem, and either to explicate and utilise them, or to reject the problem as ill-defined.
- To be efficient, a distinctive tendency for “economy of thought,” striving to find the most economical ways to solve problems, for clarity and simplicity in a solution.
- To be aware of the presence and importance of an underlying structure.
- To use rapid abbreviation, compression or a curtailment of reasoning in problem solving e.g. algebra.
- How to grasp encapsulation and de-encapsulation of mathematical objects and procedures.

How does your study of MATHEMATICS support your study in other subjects?

Study of any subject in our curriculum takes full advantage of links with other subject areas- we term these as interdisciplinary links and we make the most of them because we know that deep learning requires the transference of knowledge and skills from one topic of learning to another. Once you can transfer your learning across topics and subject areas then you are really mastering what you know and how to apply your understanding and skills.

Mathematics touches on many other subjects such as geography and science, any subject that analyses data, looks at trends, uses formulae. Computer Science is a subject that uses the algorithmic approach that many topics in mathematics also use. The ability to follow a process accurately is applicable

to many other subjects too. The Social Sciences, particularly at Post 16 and at undergraduate level have a strong need for the use of data, for understanding of exponential growth and decay, for manipulation of formulae – and this is one reason why the Core Maths AS Level was introduced recently.

Across the other subjects, teachers will make reference to your learning in Maths and this will help you to develop your understanding. There may be opportunities to explore the links between science, engineering and mathematics departments in STEM activities.

Outside of Mathematics lessons there are a range of initiatives that can help you deepen your understanding of mathematics such as Numeracy Ninjas, Timetable Rock Stars, UKMT Maths Challenge led by Leeds University, Maths Masters – for our elite mathematicians, Outwood Maths Challenge with Y5 & 6 and online learning programmes such as the wonderful Hegarty Maths.

How are you assessed in MATHEMATICS?

Throughout the 5 year MATHEMATICS course you are assessed using the following assessment objectives which ensure that you can cumulatively build your subject understanding in preparation for future GCSE and A Level study. There are 6 assessment points each year that we term Praising Stars©. In Year 7 and 8 we assess against age related expectations. In Years 9, 10 and 11 we assess against GCSE specification criteria.

Key Assessment Objectives

AO1: Use and apply standard techniques

Students should be able to:

- accurately recall facts, terminology and definitions
- use and interpret notation correctly
- accurately carry out routine procedures or set tasks requiring multi-step solutions

AO2: Reason, interpret and communicate mathematically

Students should be able to:

- make deductions, inferences and draw conclusions from mathematical information
- construct chains of reasoning to achieve a given result
- interpret and communicate information accurately

- present arguments and proofs
- assess the validity of an argument and critically evaluate a given way of presenting information

AO3: Solve problems within mathematics and in other contexts

Students should be able to:

- translate problems in mathematical or non-mathematical contexts into a process or a series of mathematical processes
- make and use connections between different parts of mathematics
- interpret results in the context of the given problem
- evaluate methods used and results obtained
- evaluate solutions to identify how they may have been affected by assumptions made

GCSE specifications in mathematics should enable students to:

1. develop **fluent** knowledge, skills and understanding of mathematical methods and concepts
2. acquire, select and apply mathematical techniques to **solve problems**
3. **reason mathematically**, make deductions and inferences and draw conclusions
4. comprehend, interpret and **communicate mathematical information** in a variety of forms appropriate to the information and context.

How can Mathematics support your future?

We offer the study of GCSE and A Level Mathematics, Further Mathematics and AS Core Mathematics and we strongly encourage your continued study in this fantastic subject if you have demonstrated a passion for it, a flair and an ability.

However, whether you have chosen to study Mathematics into A level or not you will have gained a lot from its study over the 5 years from years 7-11. We know that the depth of understanding we encourage and support you to achieve will set you up well to be not only numerate, but a really logical and analytical thinker, who is resilient and ready to solve problems.

Mathematics is offered at prestigious universities either as a single honours or a joint honours subject studied alongside other disciplines e.g. Statistics, Computer Science, Science, Philosophy, Engineering.

A high level of qualification in mathematics is a prerequisite for honours degrees in many engineering and physics related subjects.

It is also cited that an A level in maths demonstrates the very high level of analytical thinking that many universities are looking for in their applicants. The very fact that you have been able to study mathematical thinking post 16 will help your future application be they for colleges, universities, apprenticeships or employment.

A strong GCSE in Maths opens doors for your future career – employers look favourably on this and it would put you in a very strong position when looking for jobs or placements Post 16 and in colleges.

Careers that the study of MATHEMATICS supports include:

- Actuarial analyst
- Actuary
- Chartered accountant
- Chartered certified accountant
- Data analyst
- Data scientist
- Investment analyst
- Research scientist (maths)
- Secondary school teacher
- Software engineer
- Statistician
- Civil Service fast streamer
- Financial manager
- Financial trader
- Insurance underwriter
- Meteorologist
- Operational researcher
- Quantity surveyor
- Software tester

CURRICULUM PROGRESSION PATHWAY FOR MATHEMATICS AT OUTWOOD ACADEMY SHAFTON

For the academic year 2020/2021 alongside the new content being taught students will spend time reviewing, consolidating and extending the home online learning that they have completed during the school closure to ensure that they have a thorough understanding of these topics

	YEAR 7	YEAR 8	YEAR 9	YEAR 10	YEAR 11
Autumn 1	<p>UNIT 0 Statistics</p> <ol style="list-style-type: none"> 1. Transition project covering: 2. Collecting and organising data 3. Construct statistical diagrams incl. an intro to Venn Diagrams 	<p>UNIT 5 Applications of Algebra</p> <ol style="list-style-type: none"> 1. Order of operations Order of ops NS 2. Substitution 3. Simplify algebraic expressions 4. Sequences (term-to-term, not nth term) 	<p>UNIT 9 2-D Geometry</p> <ol style="list-style-type: none"> 1. Draw accurate triangles and quadrilaterals 2. Conversion between length units and between area units 3. Areas of parallelograms and trapeziums 4. Areas and perimeters of composite figures 	<p>UNIT 13 3-D geometry</p> <ol style="list-style-type: none"> 1. Area of a circle 2. 3-D shapes & their nets; plans and elevations 3. Volume and surface area of prisms, composite solids, pyramids, cones and spheres (with formula and without for pyramids and cones.) and mass, density and volume 4. Pythagoras – 2-D and 3-D 	<p>UNIT 23 Reasoning</p> <ol style="list-style-type: none"> 1. Algebraic arguments 2. Loci 3. Key angle and shape facts 4. Coordinates (including midpoints, problems) 5. Equations of parallel and equations of perpendicular lines 6. Vectors and vector proofs
Autumn 2	<p>UNIT 1 Solve Word Problems (add and subtract)</p> <ol style="list-style-type: none"> 1. Place value (including decimals) Place Value NS 2. Add and subtract (including decimals) 	<p>UNIT 6 Percentages & Statistics</p> <ol style="list-style-type: none"> 1. Proportional Reasoning I Proportion NS 2. Convert FDP Basic FDP NS 3. Ordering FDP & equivalence 	<p>UNIT 10 Proportion & Percentages</p> <ol style="list-style-type: none"> 1. FDP of amounts 2. Amounts as percentages 3. Percentage Increase and Decrease 4. Reverse Percentages 	<p>UNIT 11 Probability and Statistics</p> <ol style="list-style-type: none"> 1. Probability 2. Averages from frequency tables and Averages from grouped data 3. Compare two data sets including stem-and-leaf diagrams 4. Scatter graphs, basic correlation and lines of best fit 	<p>UNIT 24 Geometry and Number</p> <ol style="list-style-type: none"> 1. Properties of 3-D shapes; their plans and elevations 2. Surface area and volume of pyramids, cones and spheres (including exact answers) and similar areas and volumes 3. Trigonometry in all triangles 4. Indices and Surds

	<p>3. Rounding and Estimating</p> <p>4. Perimeter</p>	<p>4. Percentage of an amount</p> <p>5. Find the whole, given the part and the percentage</p> <p>6. Interpret and compare statistical representations.</p> <p>7. Averages and the range incl. frequency tables</p>		<p>UNIT 14 Algebraic Expressions</p> <p>1. Basic laws of indices and introduction to Surds and four operations</p> <p>2. Sequences including arithmetic & geometric</p> <p>3. Expansion incl. double brackets</p> <p>4. Factorisation incl. double brackets and solving simple quadratic equations</p> <p>5. Algebraic manipulation (rearranging and advance rearrange)</p>	<p>5. Limits of accuracy and upper and lower bounds</p>
<p>Spring 1</p>	<p>UNIT 2 Explain & Investigate (multiply and divide)</p> <p>1. Factors, HCF, multiples, LCM</p> <p>2. Venn Diagrams and sets</p> <p>3. Multiply and divide (including decimals)</p> <p>4. Area of rectangles,</p>	<p>UNIT 7 Number</p> <p>1. Primes and indices incl. basic laws of indices</p> <p>2. Basic introduction to Surds and four operations</p> <p>3. Prime Factorisation to find LCM, HCF, squares, cubes</p> <p>4. Standard Form</p>	<p>UNIT 11 Probability and Statistics</p> <p>1. Probability</p> <p>2. Averages from frequency tables and Averages from grouped data</p> <p>3. Compare two data sets including stem-and-leaf diagrams</p> <p>4. Scatter graphs, basic correlation and lines of best fit</p>	<p>UNIT 15 Graphs and Proportion</p> <p>1. Cartesian coordinates and an introduction to functions</p> <p>2. Linear graphs</p> <p>3. Direct and inverse proportion</p> <p>4. Calculate with scales</p> <p>5. Variation and variation with powers (direct and inverse proportion with algebra)</p> <p>UNIT 16 2-D Geometry</p> <p>1. Bearings</p>	<p>UNIT 25 Applications of Algebra</p> <p>1. Expand and factorise binomials and algebraic fractions</p> <p>2. Quadratic equations and complete the square, quadratic formula, quadratic inequalities</p> <p>3. Cubic and reciprocal graphs, exponential graphs, trig graphs, transformations of graphs</p> <p>4. Simultaneous equations</p>

	<p>triangles and parallelograms</p> <p>5. Calculate the mean</p>	<p>Powers of 10 NS</p> <p>5. Add and subtract fractions with different denominators</p>		<p>2. Further construction and loci</p> <p>3. Congruence and similarity</p> <p>4. Triangles and quadrilaterals (angles on diagonals)</p> <p>5. Angles in polygons</p>	<p>5. Graphical solutions of equations</p>
<p>Spring 2</p>	<p>UNIT 3 Geometry</p> <p>1. Draw, measure and name angles</p> <p>Time NS</p> <p>2. Find unknown angles (straight lines, at a point, vertically opposite)</p> <p>Number bonds NS</p> <p>3. Properties of triangles and quadrilaterals</p>	<p>UNIT 8 Algebraic Expressions</p> <p>1. Formulate and evaluate expressions</p> <p>2. Linear equations</p> <p>3. Expressions and equations from real- world situations</p> <p>4. Linear sequences: nth term</p> <p>5. Cartesian coordinates and an introduction to functions</p>	<p>UNIT 12 Proportional Reasoning</p> <p>Proportion NS</p> <p>1. Ratio – equivalence and simplifying</p> <p>2. Ratio – problem solving</p> <p>3. Maps and scales</p> <p>4. Ratio and Rate incl. speed, distance, time and pressure</p> <p>5. Constructing pie and interpreting pie charts</p> <p>6. Rounding, significant figures and estimation</p>	<p>UNIT 17 Equations and Inequalities</p> <p>1. Construct and solve equations and inequalities</p> <p>2. Graphical solutions to simultaneous linear equations</p> <p>3. Linear simultaneous equations</p> <p>4. Quadratic and non-linear graphs and links with quadratic equations</p> <p>UNIT 18 Sampling and Probability</p> <p>1. Populations and samples; capture/recapture</p> <p>2. Theoretical and experimental probability</p> <p>3. Listing and the product rule for counting</p>	<p>UNIT 26 Algebra and Geometry</p> <p>1. Arcs and sectors of circles</p> <p>2. Using angle and shape facts to derive results and circle theorems</p> <p>3. Proof in algebra and geometry and equation of a circle and the tangent to a circle</p> <p>4. Variation and variation with powers</p> <p>UNIT 27 Functions</p> <p>1. Functions – will be taught at every appropriate opportunity (e.g. algebraic notation, rearranging formulae, linear graphs, mappings etc) and then brought together as a topic here</p>

				<ul style="list-style-type: none"> 4. Set notation & Venn diagrams 5. Combined events, including tree diagrams and conditional probability 	
Summer 1	<p>UNIT 4 Fractions</p> <p>Introduction to fractions NS</p> <ul style="list-style-type: none"> 1. Equivalent fractions and ordering Factors NS 2. Mixed numbers & improper fractions 3. Adding & subtracting same denominators 4. Fraction of a quantity & multiplying fractions 5. Divide fractions 	<p>UNIT 9 2-D Geometry</p> <ul style="list-style-type: none"> 1. Draw accurate triangles and quadrilaterals Measuring lengths NS 2. Find unknown angles (incl. parallel lines) 3. Conversion between length units and between area units 4. Areas of parallelograms and trapeziums 5. Areas and perimeters of composite figures 	<p>UNIT 13 3-D geometry</p> <ul style="list-style-type: none"> 1. Circumference and area of a circle 2. 3-D shapes & their nets; plans and elevations 3. Pythagoras – 2-D and 3-D Pythagoras 4. Volume and surface area of prisms, composite solids, pyramids, cones and spheres (with formula and without for pyramids and cones.) and mass, density and volume 	<p>UNIT 19 Geometry</p> <ul style="list-style-type: none"> 1. Transformations (translation, rotation, reflection) and combined transformations 2. Use known angle and shape facts to obtain simple proofs 3. Enlargement and negative scale factors of enlargement 4. Combine transformations <p>UNIT 20 Geometry</p> <ul style="list-style-type: none"> 1. Similar shapes 2. Exploring trigonometric ratios with 30-60-90 and 45-45-90 triangles of varying dimensions (*not sin,cos,tan) 	

				3. Trigonometry and Pythagoras in right angled triangles, 3-D trigonometry and Pythagoras	
Summer 2	UNIT 5 Applications of Algebra <ol style="list-style-type: none"> 1. Order of operations Order of ops NS 2. Substitution 3. Simplify algebraic expressions 4. Sequences (term-to-term, not nth term) 	Completion & Revisit of Units 5 - 9	UNIT 14 Algebraic Expressions <ol style="list-style-type: none"> 1. Basic laws of indices and introduction to Surds and four operations 2. Sequences including arithmetic & geometric 3. Expansion incl. double brackets 4. Factorisation incl. double brackets and solving simple quadratic equations 5. Algebraic manipulation (rearranging and advance rearrange) UNIT 15 Graphs and Proportion <ol style="list-style-type: none"> 1. Cartesian coordinates and an introduction to functions 	UNIT 21 Number <ol style="list-style-type: none"> 1. Calculations with and rules of indices and fractional indices 2. Indices and Surds 3. Calculations with standard form 4. Repeated change and percentage/fraction problems 5. Standard non-linear sequences and recurrence relations and iteration 	

			<ol style="list-style-type: none">2. Linear graphs3. Direct and inverse proportion4. Calculate with scales5. Variation and variation with powers (direct and inverse proportion with algebra)
